

# Aqua Token Smart Contract User Guide

---

## Introduction

Aqua Token Smart contract is a software deployed on Ethereum blockchain. It implements the following functions:

1. Keeps track of Aqua Token holding of each Aqua token holder.
2. Keeps track of token holders' payouts such as dividends and redemptions and allows for withdrawals of these payments by token holders.
3. Specifies the procedure for profit distributions to token holders.
4. Provides for requesting and cancellation of token redemptions (buy-backs).
5. Provides standard interface (ERC20) for Ethereum tokens that allows the tokens to be tradeable on any cryptocurrency exchange supporting the standard.
6. Wind up procedure.

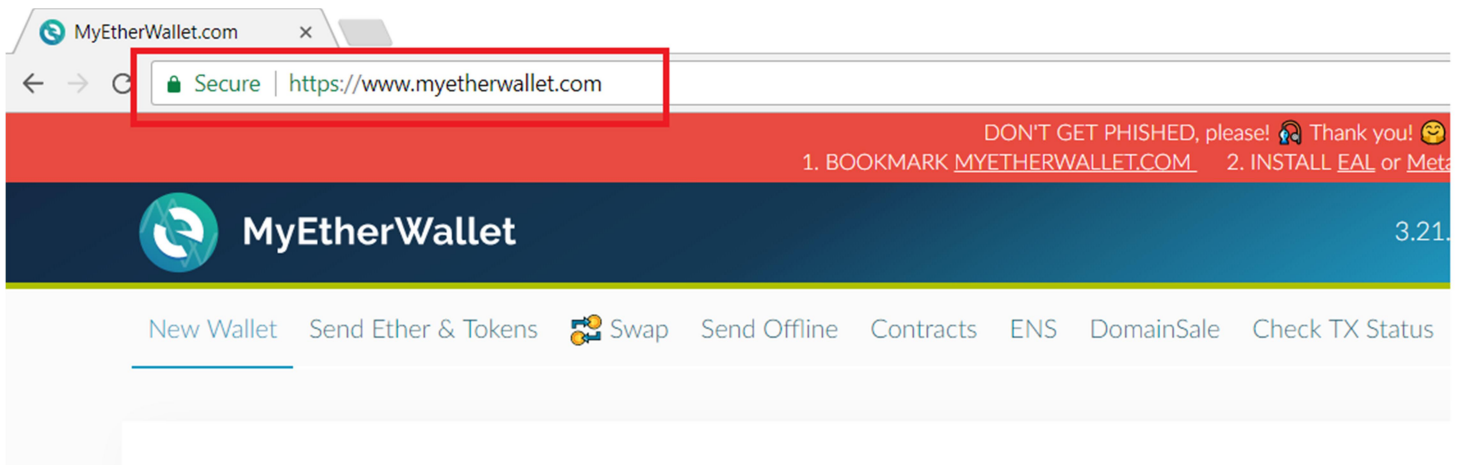

## Part 1 – Viewing your Aqua Token balance and transferring tokens

In this part, we will describe how to view your Aqua Token holding and how to send your Aqua tokens to another address. We will illustrate this using **My Ether Wallet**. Even though you may be using another wallet software, the concepts remain broadly the same so other wallets will work similarly. We assume that you have read our guide on **How To Create Ethereum Wallet Guide** (<https://iaqua.com.au/documents?name=how-to-create-ethereum-wallet-guide>) so you have the Keystore file for your wallet, and also our **How to Buy Aqua Tokens** guide (<https://iaqua.com.au/documents?name=how-to-buy-aqua-tokens-guide>)

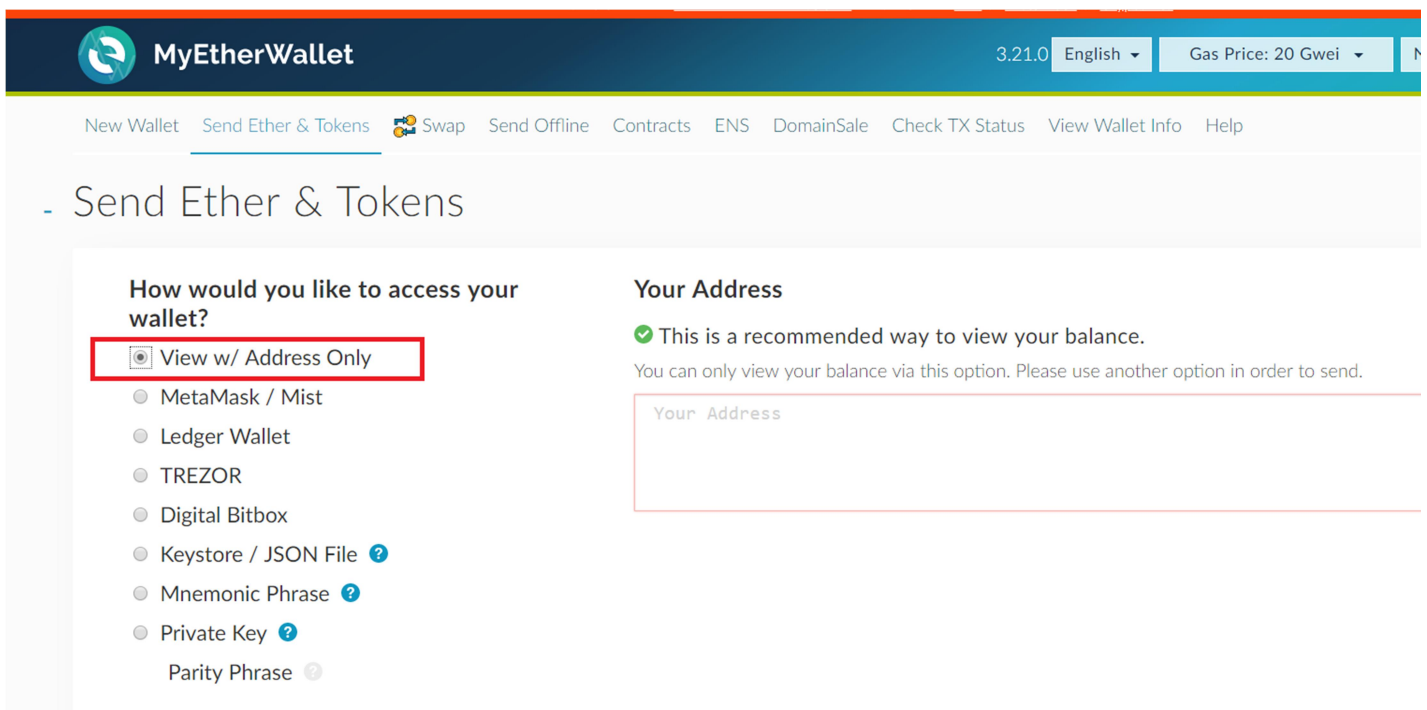

### Viewing your Aqua Token Balance

To view your Aqua Token balance, you need to have an Aqua Token Smart Contract address. It was provided to you when you participated in our ICO. After successful completion of the ICO, your Aqua Token Smart Contract address is going to be published on our website: <https://iaqua.com.au>

In your web browser, navigate to My Ether Wallet website: <https://www.myetherwallet.com/>. Please make sure the link is spelled correctly and the connection is secure:

Click on the **Send Ether & Tokens** link in the top menu strip. **Send Ether & Tokens** page will be displayed. Select the **View w/ Address Only** option. Your Address input field will appear on the right side of the page:

Paste your wallet address in the field. Never type Ethereum addresses manually, since it's very easy to make a mistake. Always use copy/paste function on your computer or device. Once you paste the address, the **View Balance** button will appear:

## Your Address

✓ This is a recommended way to view your balance.

You can only view your balance via this option. Please use another option in order to send.

0x

View Balance

Press the **View Balance** button. Your Ether balance for the entered address will be displayed on the right side of the page. Under account details section you should see **Token Balances** section.

## Adding Aqua Token

Click on the **Add Custom Token** button:

one of the other options to unlock

Show All Tokens Add Custom Token

 [REDACTED] AQUAX

## Transferring your tokens to another address

In your web browser navigate to My Ether Wallet website: <https://www.myetherwallet.com/> . Please make sure the link is spelled correctly and the connection is secure:

Click on the **Send Ether & Tokens** link in the top menu strip. The **Send Ether & Tokens** page will be displayed. Please choose the way you want to access your wallet. In this guide we assume you followed our instructions on how to create Ethereum wallet (that are available under this link: <https://iaqua.com.au/documents?name=how-to-create-ethereum-wallet-guide>), so select **Keystore / JSON File** option:

MyEtherWallet

New Wallet

Send Ether & Tokens

Swap

Send Offline

Contracts

ENS

Domain!

## - Send Ether & Tokens

### How would you like to access your wallet?

- ☐ View w/ Address Only
- ☐ MetaMask / Mist
- ☐ Ledger Wallet
- ☐ TREZOR
- ☐ Digital Bitbox
- ☐ Keystore / JSON File ?
- ☐ Mnemonic Phrase ?
- ☐ Private Key ?
- ☐ Parity Phrase ?

Select Your Wallet File interface should appear. Click on the **SELECT WALLET FILE...** button and choose your wallet file:

## Select Your Wallet File

✖ This is not a recommended way to access your wallet.

Entering your private key on a website dangerous. If our website is compromised or you accidentally visit a different website, your funds will be stolen. Please consider:

- [MetaMask](#) or [A Hardware Wallet](#) or [Running MEW Offline & Locally](#)
- [Learning How to Protect Yourself and Your Funds](#)

If you must, please double-check the URL & SSL cert. It should say <https://www.myetherwallet.com> & [MYETHERWALLET LLC](#) in your URL bar.

SELECT WALLET FILE...

Once your wallet file is loaded the password entry field should appear:

SELECT WALLET FILE...

Your wallet is encrypted. Good! Please enter the password.

Password

Enter your wallet password and hit the **Unlock** button:

SELECT WALLET FILE...

Your wallet is encrypted. Good! Please enter the password.

.....|

Unlock

The wallet gets unlocked and you should see **Send Ether & Tokens page**. Your Ether and token balances should display on the right side of the page. You should see your Aqua Token (AQUAX) balance in the **Token Balances** section at the bottom-right side of the page:

## Token Balances

### How to See Your Tokens

You can also view your Balances on  
<https://ropsten.etherscan.io>

Show All Tokens

Add Custom Token

AQUAX

If you don't see AQUAX token balance like this then please follow steps described in **Adding Aqua Token** section of this guide.

Now fill in the transfer details of the **Send Ether & Tokens** form.

## + Send Ether & Tokens

To Address

0x

[Redacted Address]

Amount to Send

[Redacted Amount]

AQUAX ▾

[Send Entire Balance](#)

Gas Limit

124218

[+Advanced: Add Data](#)

Generate Transaction

**To Address** – paste the destination address for your tokens.

**Amount To Send** – enter the number of Aqua Tokens you wish to send. Make sure you choose AQUAX as units of the amount to send.

**Gas Limit** - My Ether Wallet should estimate the gas required automatically. In case your client doesn't estimate gas then enter at least 130000.

After you the details press **Generate Transaction** button.

Your transaction will be signed by your private key and displayed below together with the **Send Transaction** button.

Generate Transaction

Raw Transaction

```
{ "nonce": "0x00", "gasPrice": "0x04a817c800", "gasLimit": "0x03025a", "to": "0x6Fb3f0Ca2cd110961e416a831dD2f1249B1F675A", "value": "0x0de0b6b3a7640000", "data": "" }
```

Signed Transaction

```
0xf86d808504a817c8008303025a946fb3f0ca2cd110961e416a831dd2f1249b1f675a880de0b6b3a76400008029a09442d011f3073b3799f6ae80146d1257ee78fa5d7a2ebe2e359c8f165e
```

Send Transaction

Now press the **Send Transaction** button. The **You are about to send...** confirmation dialog should popup:

Please save the transaction hash for your records in case you need to refer to it later. The transaction hash uniquely identifies your transaction on the Ethereum blockchain, and can be used to track the transaction on Ethereum blockchain information websites such as <https://etherscan.io/>

You can also click **Check TX Status** or **Verify Transaction** buttons to track your transaction

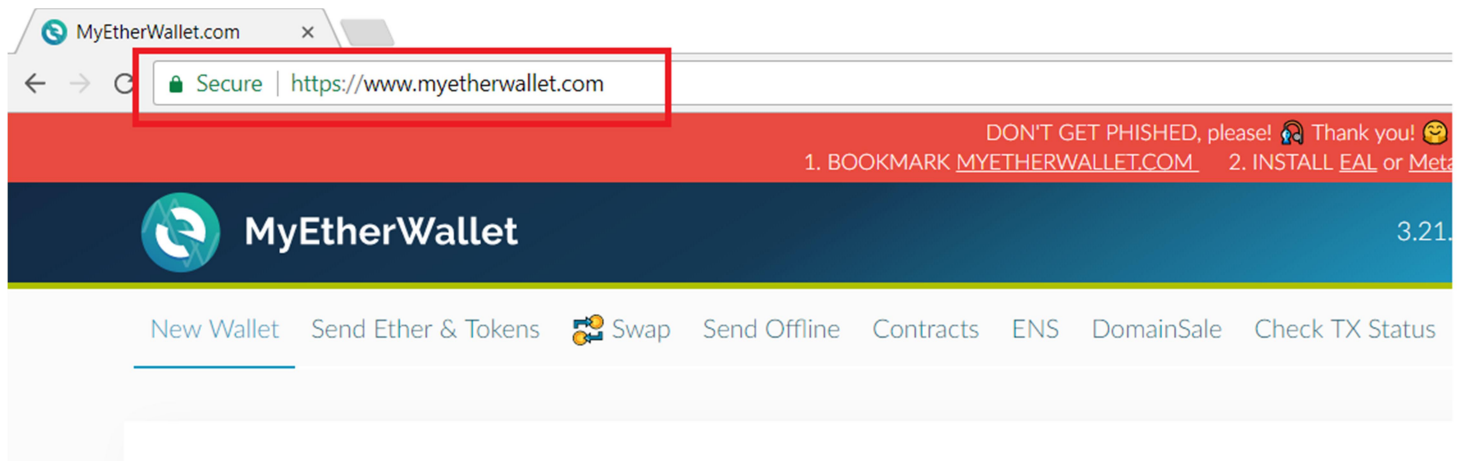

It usually takes a few minutes to confirm your transaction, but can take longer depending on network load. Once the transaction is confirmed (included in a block and mined), your balances will be updated.

## Part 2 – Interacting with Aqua Token Smart Contract

### Setting up the contract interaction interface

In order to interact with Aqua Token Smart contract beyond basic operations such as viewing your token balance and transferring tokens (described in Part 1 of this guide), you need the contract's address as well as Application Binary Interface (ABI). You can find Aqua Token ABI and address published under this link: <https://iaqua.com.au/smart-contracts/aqua-token/>

In your web browser navigate to My Ether Wallet website: <https://www.myetherwallet.com/>. Please make sure the link is spelled correctly and the connection is secure:

Click on the **Contracts** link from the top menu. **Interact with Contract** page should open:

```
{
  "constant": false,
  "inputs": [
    {
      "name": "maxNumberOfSteps",
      "type": "uint256"
    }
  ],
  "name": "continueDistribution",
  "outputs": [
    {
      "name": "",
      "type": "bool"
    }
  ],
  "payable": false,
  "stateMutability": "nonpayable",
  "type": "function"
}, {
  "constant": true,
  "inputs": [],
  "name": "name",
  "outputs": [
    {
      "name": "",
      "type": "string"
    }
  ],
  "payable": false,
  "stateMutability": "view",
  "type": "function"
}, {
  "constant": false,
  "inputs": [
    {
      "name": "_spender",
      "type": "address"
    }
  ],
```

Then on the **Interact with Contract** form, press **Access** button. The **Read/Write Contract** section should appear:

Contract Address

0x[REDACTED]

Select Existing Contract

Select a contract...

ABI / JSON Interface

```
{
  "indexed": false,
  "name": "amount",
  "type": "uint256"
},
{
  "indexed": false,
  "name": "hasRemainingBalance",
  "type": "bool"
},
{
  "name": "WithdrawBalance",
  "type": "event",
  "anonymous": false,
  "inputs": [
    {
      "indexed": false,
      "name": "_continue",
      "type": "bool"
    }
  ]
},
{
  "name": "ContinueDistribution",
  "type": "event",
  "anonymous": false,
  "inputs": [
    {
      "indexed": false,
      "name": "amount",
      "type": "uint256"
    }
  ]
},
{
  "name": "WindingUpStarted",
  "type": "event",
  "anonymous": false,
  "inputs": [
    {
      "indexed": true,
      "name": "from",
      "type": "address"
    }
  ]
},
{
  "name": "StartTrading",
  "type": "event",
  "anonymous": false,
  "inputs": [
    {
      "indexed": true,
      "name": "from",
      "type": "address"
    }
  ]
},
{
  "indexed": false,
  "name": "numberOfTokens",
  "type": "uint256"
},
{
  "name": "Burn",
  "type": "event"
}
]
```

Access

Read / Write Contract

0x[REDACTED]

Select a function

Now you can interact with the contract by selecting a relevant function from the **Select a function** dropdown and filling in required parameters if any and hitting Read or Write button if required.

If you select a function that requires the state of the blockchain changed, e.g. transfer tokens or withdraw payouts then you will be required to access your Ethereum wallet. The **How would you like to access your wallet?** dialog will appear. Select **Keystore / JSON file** option:

## How would you like to access your wallet?

- ☐ MetaMask / Mist
- ☐ Ledger Wallet
- ☐ TREZOR
- ☐ Digital Bitbox
- ☐ Keystore / JSON File ?
- ☐ Mnemonic Phrase ?
- ☐ Private Key ?
- Parity Phrase ?

**Select Your Wallet File** interface should appear. Click on the **SELECT WALLET FILE...** button and choose your wallet file:

### Select Your Wallet File

✖ This is not a recommended way to access your wallet.

Entering your private key on a website dangerous. If our website is compromised or you accidentally visit a different website, your funds will be stolen. Please consider:

- [MetaMask or A Hardware Wallet or Running MEW Offline & Locally](#)
- [Learning How to Protect Yourself and Your Funds](#)

If you must, please double-check the URL & SSL cert. It should say <https://www.myetherwallet.com> & **MYETHERWALLET LLC** in your URL bar.

SELECT WALLET FILE...

Once your wallet file is loaded, the password entry field should appear:

SELECT WALLET FILE...

Your wallet is encrypted. Good! Please enter the password.

Password

Enter your wallet password and hit the **Unlock** button:

SELECT WALLET FILE...

Your wallet is encrypted. Good! Please enter the password.

.....|

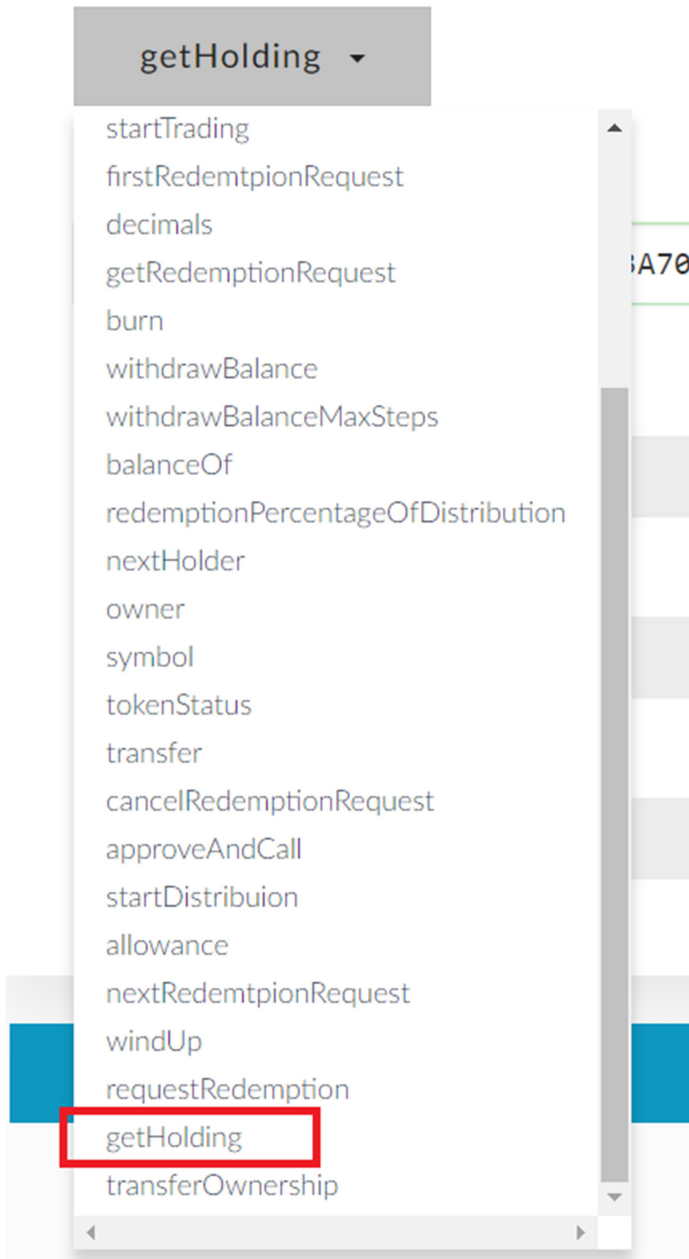

Unlock

The wallet will be unlocked and you should be able to call function.

## Viewing your token holdings and dividend or redemption payments available for withdrawal

Please follow the instructions of the previous section [Setting up the contract interaction interface](#).

Once the **Read / Write Contract** section appears click on the **Select a function** dropdown and choose **getHolding** function:

**\_holder** input field should appear. Please paste your wallet address into this field. This must be the address that you used to participate in the Aqua Sale (the one that you send Ether from and the one that holds your tokens). Then press **READ** button. The following three fields should populate with values reflecting your holdings:

**totalTokens** – this is the total number of Aqua Tokens that you hold.

**lockedTokens** – this is the number of tokens (out of the total number of tokens you hold) that you requested to redeem, but the redemption request hasn't been processed as yet.

**weiBalance** – the amount of dividends and redemption payouts available for withdrawal. Please note that the displayed amount is in wei. 1 wei is equivalent to  $10^{-18}$  Ether:

### Read / Write Contract

0xd[REDACTED]

weiBalance uint256

[REDACTED]

READ

## Withdrawing payouts

Please follow the instructions of the previous section [Setting up the contract interaction interface](#).

Once the **Read / Write Contract** section appears click on the **Select a function** dropdown and choose **withdrawBalance** function:

## Read / Write Contract

Ox

Select a function ▾

firstHolder  
transferFrom  
priceOracle  
startTrading  
firstRedemptionRequest  
decimals  
getRedemptionRequest  
burn  
**withdrawBalance**  
withdrawBalanceMaxSteps  
balanceOf  
redemptionPercentageOfDistribution

You will be asked to access your wallet. Follow the instructions from the previous section to unlock your wallet.

Once the wallet is unlocked, click the **Write** button. A warning dialog will popup. Leave the **Amount to send** at 0. Gas Limit should be estimated automatically. If it doesn't, then set it to 200000. Click **Generate Transaction** button. Then click **Yes, I am sure! Make transaction**.

## Warning!

You are about to execute a function on contract.

It will be deployed on the following network:

**Amount to Send** *In most cases you should leave this as 0.*

0

**Gas Limit**

163325

Generate Transaction

**Raw Transaction**

```
{"nonce":"0x02","gasPrice":"0x04a817c800","gasLimit":"0x027dfd","to":"0xddF5A936F90E525aA5A57aE380D398"}
```

**Signed Transaction**

```
0xf889028504a817c80083027dfd94ddf5a936f90e525aa5a57ae380d3987da4a35ec280a4eeb3c910000000000000000000000
```

No, get me out of here!

Yes, I am sure! Make transaction.

Your transaction will be sent to the network and confirmation should pop up. On the confirmation, click **View your transaction** link to track your transaction:

Your TX has been broadcast to the network. This does not mean it has been mined & sent. During times of extreme volume, it may take 3+ hours to send. 1) Check your TX below. 2) If it is pending for hours or disappears, use the [Check TX Status Page](#) to replace. 3) Use [ETH Gas Station](#) to see what gas price is optimal. 4) Save your TX Hash in case you need it later:

0xd

[View your transaction](#)

Once your transaction is successfully confirmed you should see your wallet balance updated reflecting the withdrawn amount.

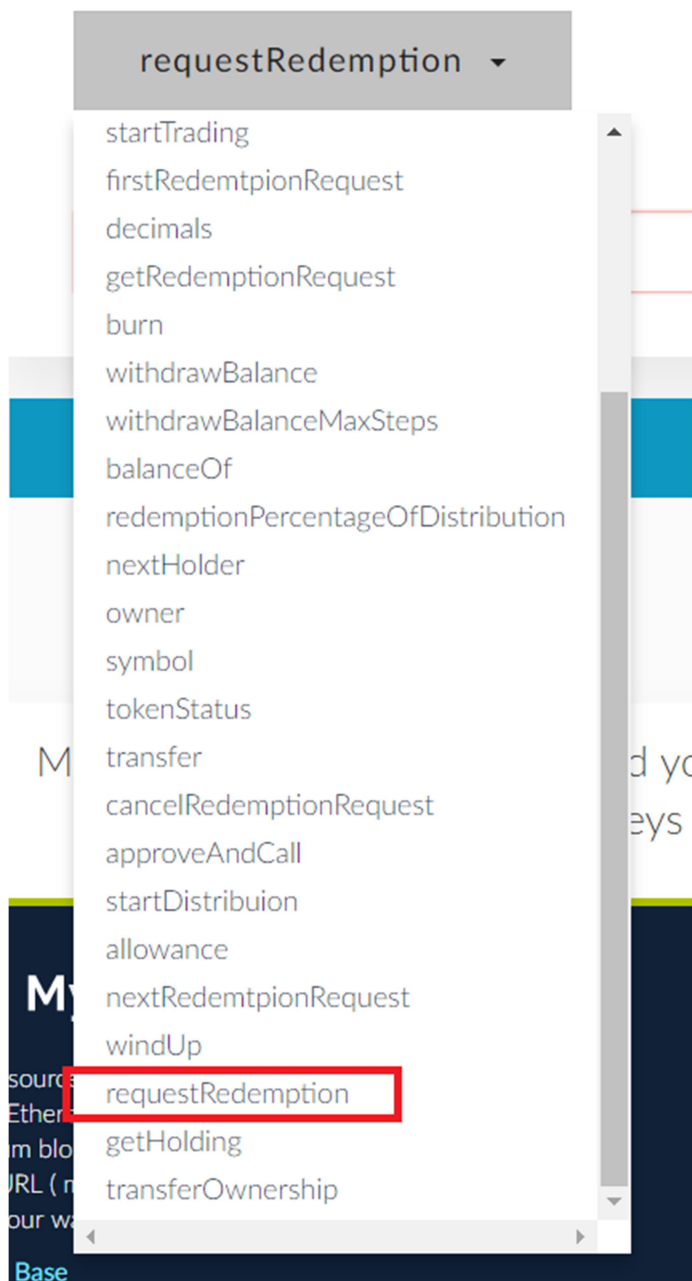

## Requesting redemptions and cancelling redemption requests

### Requesting redemption

Please follow the instructions of the section [Setting up the contract interaction interface](#).

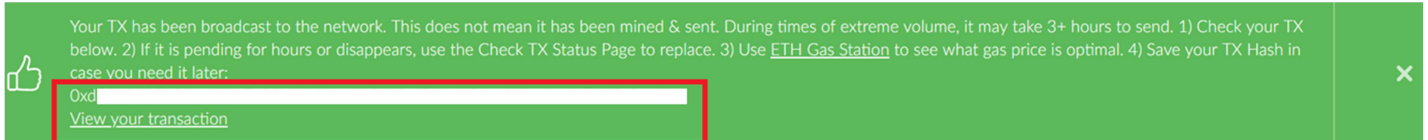

Once the **Read / Write Contract** section appears click on the **Select a function** dropdown and choose **requestRedemption** function:

**\_numberOfTokens** input field should appear. Please enter the number of tokens you want to redeem.

You may be asked to access your wallet. Follow the instructions from the **Setting up contract interaction interface** section to unlock your wallet.

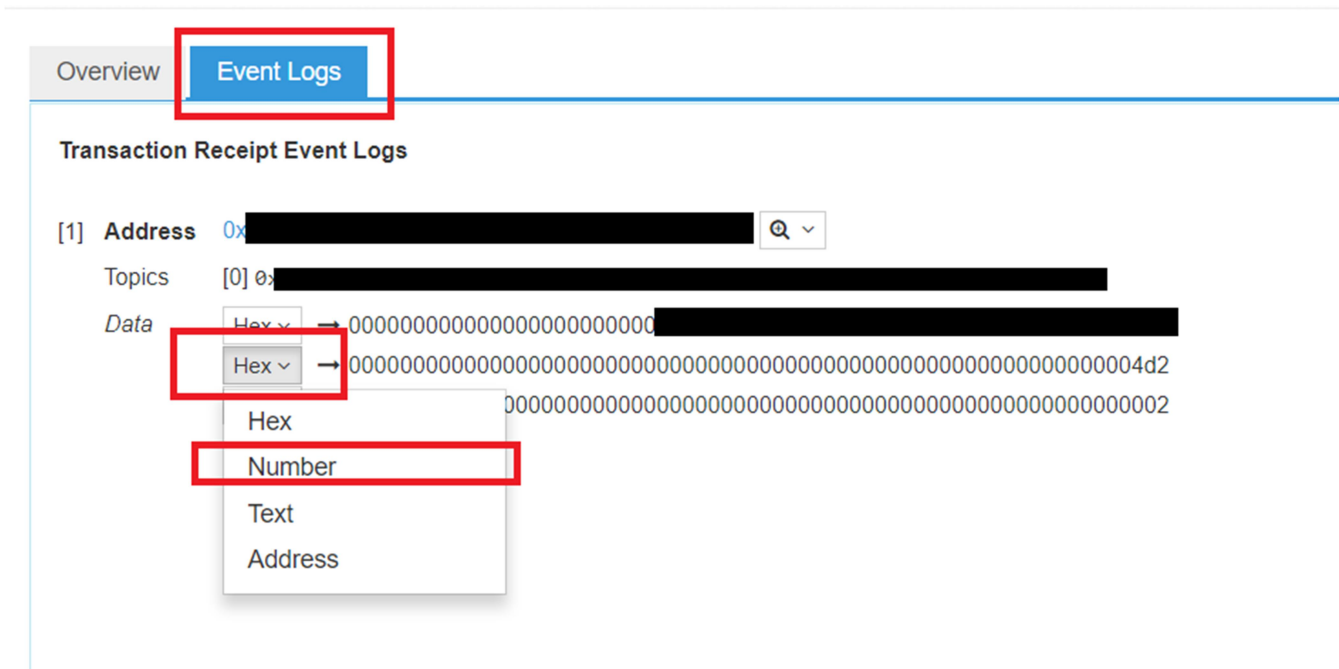

Once the wallet is unlocked press the **Write** button. A warning dialog will popup. Leave the **Amount to send** at 0. Gas Limit should be estimated automatically. If it doesn't, then set it to 200000. Click the **Generate Transaction** button. Then click **Yes, I am sure! Make transaction**. Your transaction will be sent to the network and confirmation should popup. On the confirmation click **View your transaction** link to track your transaction

[Etherscan.io](https://etherscan.io) should open with your transaction details

Once your transaction is successfully confirmed, you can switch to Event Logs tab to view your Redemption Request ID.

Click on the **Event Logs** tab, then change data type of the two of the data fields from **Hex** to **Number**:

The second field displays the number of tokens you requested to redeem, whereas the third data field displays your Redemption Request ID. Please make a record of your Redemption request ID, since you will need it in case you decide to cancel your redemption request:

Cancelling redemption

You can cancel your previous redemption request at any time before it’s completely redeemed. You need to have Redemption request ID on record, from the time you submitted the redemption request. To cancel your Redemption request please do the following:

Please follow the instructions of the section [Setting up the contract interaction interface](#).

Once the **Read / Write Contract** section appears click on the **Select a function** dropdown and choose **cancelRedemptionRequest** function:

\_requestId input box should appear. Enter your Redemption request ID of the redemption request that you wish to cancel.

## Read / Write Contract
